Optribution goes to Amsterdam

DEV's optical signal transmission and distribution at IBC 2010

*„Optribution – Optical Transmission and Distribution of RF Signals“ is the cornerstone of DEV Systemtechnik's participation in the international congress and trade show IBC, September 10 - 14, 2010, in Amsterdam, The Netherlands. Following the concept's successful launch at the ANGA Cable trade fair in Cologne, Germany, in May, numerous newly developed products presented on **Stand Nr. 1.F50 in Hall 1** emphasize DEV's claim to be the leading vendor of solutions for the opto-electronic transmission and distribution of RF signals over the entire transmission path.*

Optribution is DEV Systemtechnik's systematic approach to the ongoing development of the signal distribution infrastructure. It applies DEV's RF expertise to the optical system parts and enables a homogenous and seamless growth of the user's infrastructure, realized with system components from one trusted source.

At IBC 2010, DEV Systemtechnik is going to release not less than 54 new products in three system families for the optical transmission, reception and distribution of RF signals. Common to all of them are excellent electrical and optical data and a continuously increasing degree of integration, according to DEV's demanding motto: „Fewer Devices with optimized functionality!“

About DEV Systemtechnik

DEV Systemtechnik GmbH & Co. KG is the first choice for the transmission and distribution of radio frequency signals as, for instance, required in head end stations. The company develops and produces leading-edge products and systems for the entire signal transmission path. The portfolio from DEV comprises fully coordinated product solutions, from antenna to receiver. All products are “Made in Germany” and meet the highest demands on system availability, reliability and controllability.
